# Quality and reliability for the demanding user

ESTERI D-240 is a single stage centrifugal pump. It has stainless steel pump shaft and gunmetal frame. The pump unit is reliable in operation and maintenance free.

The pump is fitted with mechanical or hydraulic transmission and can be mid- or rear mounted. The direction of the pump's rotation and transmission ratio can be chosen according to the chassis.

Separate, towable or stationary combustion engine can be also used as the power source. In the pump chamber and the delivery manifold there are heating ducts, in which the engine coolant circulates.

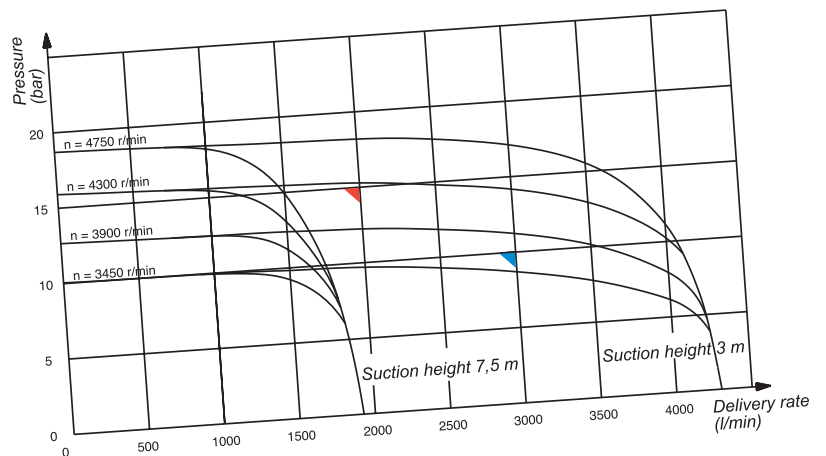

The different variations of the pump have been developed in cooperation with professional, skilled users.

The rear mounted D-240 pump is equipped with compressed air pressure primer.

The D-240 boat pump is equipped with manually operated mechanical clutch.

Nominal speed: 4300 r/min  
Nominal delivery power: 90 kW (3000 l/min, 10 bar)
